

Vasiliy Polyakov

Senior Software Engineer

job@vpolyakov.cv | vpolyakov.cv | linkedin.com/in/invasy | github.com/invasy

Summary

Software engineer (C++/Qt, Scala, Python) with over 10 years of experience in enterprise services development.

Development automation specialist with a vast CI/CD and DevOps expertise.

Collaborating with distributed teams in different software development stages.

Constantly improving skills with new technologies and instruments.

Passionate about efficiency and performance.

GNU/Linux and FOSS enthusiast.

Experience

Senior Software Engineer, NGENIX – Moscow, Russia (*remote*) June 2023 – present

Tech stack: Python, Flask, FastAPI, OpenAPI, Starlette, SQLAlchemy, Lua, nginx, PostgreSQL, Consul, ClickHouse, VictoriaMetrics, Prometheus, GitLab CI, Kubernetes.

- Developed the central control plane for the edge platform: stateful Python service for managing business entities.
- Designed OpenAPI-driven REST APIs (Tornado, aiohttp, FastAPI) on PostgreSQL/SQLAlchemy, Redis, Consul, Vault.
- Built event-driven audit logging and integration pipelines meeting regulatory compliance requirements.
- Maintained 140K-line codebase with 4,400+ automated tests, Prometheus monitoring, and Sentry error tracking.
- Managed project feature delivery, estimated and planned workload, coordinated with frontend, SRE, and platform teams.
- Mentored mid-level developers through code reviews, design reviews, and onboarding.

Lead Software Engineer, M.Video-Eldorado – Moscow, Russia (*remote*) Dec 2021 – Sept 2022

Tech stack: Scala, Akka, Lagom, Cassandra, Elastic Stack, SAP, GitLab CI, Kubernetes, microservices.

- Analyzed requirements and implemented architecture for new microservices.
- Collaborated with agile team, managed to enhance service robustness.
- Facilitated internal developers meetings to share ideas and knowledge.

Senior Software Engineer, Rostelecom IT – Perm, Russia Jan 2019 – Dec 2021

Tech stack: C++, Qt, CEF, Scala, Oracle, GitLabCI, Tomcat, OpenShift, JMeter, Gatling.

- Developed high performance event-driven payment service with C++, Qt, CEF, OpenShift.
- Boosted service performance by redesigning event queues.
- Organized and implemented CI/CD pipelines to decrease deployment time from days to minutes.
- Initiated migration to blue-green deployment with extensive load testing.
- Planned tasks and facilitated meetings with distributed agile team.
- Redesigned documentation and knowledge base structure, saved hours of searching for answers.

Research Engineer, Perm State University – Perm, Russia May 2018 – Dec 2018

Tech stack: C++, Fortran 90, CUDA, OpenMP, OpenMPI, OpenHPC, RHEL, Ganglia.

- Participated in research and development project for *UEC-Aviadvigatel* funded by Russian Foundation for Basic Research.
- Project result is a turbine engine computational aerodynamics model based on a proprietary numerical solver of Navier-Stokes equations.

Software Engineer, Stream (MTS) – Perm, Russia

Dec 2017 – May 2018

Tech stack: C++, STL, Boost, CMake.

- Developed in-house high performance service using C++, STL, Boost, Qt that allowed clients to commit payment transactions and view fiscal data.
- Optimized event matching algorithms to decrease server load by 21% on average.

Chief of Laboratory and Research Engineer, Perm State University – Perm, Russia

Oct 2012 – Dec 2017

Tech stack: C++, Fortran90, OpenMP, OpenMPI, CUDA, Hadoop, Perl, Ruby on Rails, Redmine, RHEL.

- Researched and developed HPC applications (fluid mechanics, aerodynamics, linguistics).
- Tasks, projects, and people management.
- HPC clusters administration and maintenance.
- Popularization of science, public lectures, science events and festivals.

Education

Perm State University, BS in Applied mathematics and informatics – Perm, Russia

Sept 2007 – Aug 2013

Technologies

C++: STL, Boost, Qt, CEF, CMake, Conan

Scala: Akka, Cats, Lagom

Python: Django, Flask, Connexion, asyncio, SQLAlchemy, Pydantic

DB: PostgreSQL, MySQL, ClickHouse, Cassandra

DevOps: GitHub Actions, GitLab CI, Jenkins, Ansible, Puppet, Docker, Podman, Kubernetes, GNU Make, Bash

Misc: Linux, Git, Jira, Confluence, Scrum, Kanban
